EDUCATION

TECHNICAL UNIVERSITY
OF CLUJ-NAPOCA

SKILLS

- WEB APPLICATIONS
- USER INTERFACES
- DATABASES
- MICROSERVICES
- SCRIPTING
- OOP
- REST/SOAP/GraphQL
- STACK MODERNIZATION
- INTEGRATION AND UNIT TESTS
- OWASP 10 – Web Security
- CI/CD

VLAD G. BRANZEI

SENIOR SOFTWARE ENGINEER

Overview:

Senior Full Stack Developer, over 13+ years of overall experience. Experienced with enterprise web apps, data-centric applications, Microservices, Multitenant apps, stack modernization, SaaS, MVPs, POCs

Main skills :

7+ years of C#, .NET 6/8/10, / .NET Framework, Entity Framework, LINQ, REST/SOAP Web APIs, Webforms, Razor Pages

4+ years of SQL Server / T-SQL / stored procedures/ query optimization/ deadlocks / performance

3+ years of Angular16+/19+, rxjs, ngrx, signals, signal store, Jest, PrimeNG, Angular Material, npm, nodejs

Message Brokers/Service Buses
RabbitMQ(Mass Transit), Kafka(Confluent Kafka library), N Service Bus with SQL Server storage

CI/CD: Jenkins, Github Actions, Gitlab

Cloud: Azure AKS, Azure ACR, Azure DevOps, Azure Service Bus, AWS EC2

Testing: Jest, XUnit, MSTest, FluentAserions, Moq

Container and Orchestration :Docker, Kind, Kubernetes

OS: Windows, Ubuntu, Arch Linux

Secondary skills :

2+ years of Python(REST APIs: Cherry Py, Tornado, Fast Api and lately Lang Graph

1+ year of SAP Fiori(OpenUI5)

6+ months of C++

Basic GenAI, RAG, vector db, chroma db, document understanding.

EXPERIENCE

SENIOR .NET FULLSTACK DEVELOPER SOFTLAB360

Jan 2024 - Present

Area: Fintech, Wealth Management

Refactorization of a monolith from .NET webforms to REST and Angular.

Built REST APIs based on architectural guidelines and using spectral tool to test conventions.

Wrote Python 3 scripts for the automated api testing platform.

Solving customer incidents, new features and new financial data integrations.

Worked with Kafka, topics, consuming and publishing, avro serialization.

Long running processes to handle large amounts of data received through integration means.

Building and maintaining Windows Services.

Worked for the multitenancy initiative: single instances handling smaller clients.

Created technical design documents and presented them to the architect team for approval before starting implementation.

Solved critical issues such as thread starvation of C# integration service that pulled financial information from multiple providers.

Technologies used:

.NET Framework , .NET 8, C#, JavaScript, JQuery, T-SQL, webforms, Angular 17, Typescript, PrimeNG, Angular Material, Tailwind, NX, Jest, Python 3, PrimeNG, Jest, Angular 19, SCSS, rxjs, pipes

SENIOR FULLSTACK .NET DEVELOPER PROGRAMMING POOL, INC.

April 2020 - JAN 2024

Area: Employee Benefits Business.

Split a monolith into micro services architecture of REST APIs.
Refactoring the UI from EpiServer to Angular 19.

Integration with Master Card Card issuer service and integration with a legacy back office tool.

Addressing vulnerability scans/ OWASP scan.

Working with sensitive data.

Used Mass Transit library with RabbitMQ.

Technologies used:

NET 8 APIs, micro services, Epi Server CMS, Dev Express Controls, Entity Framework, LINQ, Stored Procedures, query optimization, jQuery, SQL Server, RabbitMQ, Design Patterns, XUnit, Mass Transit, webforms, RESTful/SOAP, ngrx, rxjs, Angular 17

SENIOR SQL DEVELOPER MICROFOCUS

Sept 2019 – April 2020

I was the Database Support Specialist working for product the called UCMDB.

Developed and tested new server configurations to handle higher data loads and created scripts to diagnose performance bottlenecks.

Tested high availability configurations for SQL Server and PostgreSQL using AlwaysOn and Patroni.

Analyzed performance reports and wait statistics to optimize database performance.

Provided database-focused product support, resolving support tickets.

Troubleshooting long running processes, deadlocks and timeouts.

Created T-SQL scripts for internal teams and QA.

Table partitioning and query optimization.

Technology Used:

PostgreSQL, SQL Server, T-SQL, Stored Procedures, Patroni, AlwaysOn

MID .NET DEVELOPER and SQL DEVELOPER PROGRAMMING POOL

Oct 2015 – Jul 2019

I worked with SQL Server and .NET to develop new features and provide support for a financial legacy application.

Developed web services to integrate with Sales Force for multiple business units and with a customer service tool.

For these web services I used .NET Framework, WCF, Web Api, RAML, Entity Framework, LINQ, Ado.Net, REST, SOAP.

Worked with stored procedures, functions, triggers and views.
Optimized existing queries by analyzing the query execution plans and execution time, set based operations.

Worked with common table expressions, window functions, pivot, recursive queries, cubes, role ups, scheduled jobs.

I developed multiple scripts for internal purpose to help us in our daily work or to analyze database consistency.

Solved database deadlocks situations.

Working with sensitive data and applied patches in production.

JAVASCRIPT DEVELOPER EVOSOFT SIEMENS

Oct 2014 – OCT 2015

UI rebuilt from WebDynpro to SAP Fiori (a SPA javascript framework)

Integrating with REST APIs.

Technologies Used: SAP Fiori framework, Javascript, AJAX, HTML, CSS.

PYTHON DEVELOPER GAMELOFT

Augst 2013 – OCT 2014

Business Area: Mobile Games | Gaming

Support for games with online connectivity.
Features for a web tool to investigate connectivity, player profiles hacked accounts, data loss, leaderboards, inbox messaging, instant messaging, and matchmaking.

Found cause of critical issues related to loss of player profiles, leaderboards and reward event system.

Focused on the Total Conquest title.

Exposed to C++ and cURL during bug hunt that crippled the integrity of player profiles.

Technologies Used:

Worked with Python, CherryPy, C++, MySQL, HTML, CSS, REST, cURL, Javascript, JQuery, python scripts for testing APIs, Logs, Ubuntu, Bash, PHP
